SONOVA™

Sonova | SBB Bass Bridge

The modular design installs either as a full assembly or as individual string mounts.

Why Choose Sonova

The Sonova SBB Bass Bridge provides ultimate versatility for both the luthier/installer and end-user. Machined from solid brass, this uniquely designed bridge will produce excellent sustain for your instrument(s).

Stylish and elegant, the Sonova bridge offers several key features that make it the right choice for both luthiers and end-users of all levels.

SONOVA™

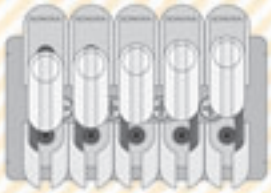

Sonova | SBB Bass Bridge

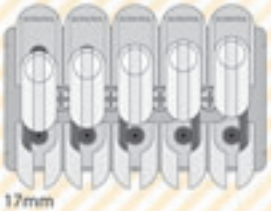

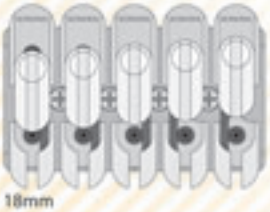

1 Pairs of front and back prespaced threaded holes in the Assembly Mount provide four precision spacing options for the End-User, ranging from 16mm to 19mm, center-to-center.

- Provides string spacing flexibility for the End-User
- Alleviates measuring effort for the Luthier/Installer
- Allows the Luthier/Installer to buy in bulk without worrying about End-User's choice for string spacing

16mm

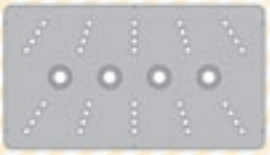

17mm

18mm

19mm

2 Centrally positioned, body-mount holes for mounting the bridge to the instrument allow the Luthier/Installer to prepare these holes regardless of End-User's string spacing choice.

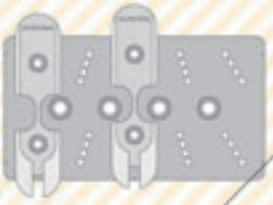

- Alleviates the potential for drilling the holes in the wrong position if the End-User changes his string spacing choice during the instrument's construction

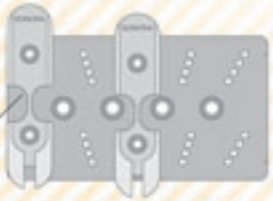

16mm and 17mm Position

18mm and 19mm Position

3 Contours on both sides of the String Anchor clear the body-mount holes regardless of string spacing choice. This allows the bridge to be fully assembled prior to shipping to the Luthier/Installer without the Luthier/Installer having to disassemble the bridge prior to its installation.

- Allows the Luthier/Installer to quickly and easily install the bridge assembly to the instrument

Contours on both sides of the String Anchor clear the body-mount holes regardless of string spacing choice.

4 Slots routed in the String Anchor provide quick and easy replacement of strings.

- Decreases time and effort to change strings.

Slots for easy string replacement.

5 (Not Shown Above) Optional individual String Assembly Mounts eliminate string "crosstalk." Wood screws replace the String Anchor machine screws.

- Provides increased flexibility for the End-User to choose between individually mounted bridge components or bridge components mounted to the Assembly Mount

Individual String Assembly Mounts are placed under the String Anchors to provide suffcient string height from the instrument.
